

Problem:

The performance of Game A.

Comparing to Game B how well it performed.

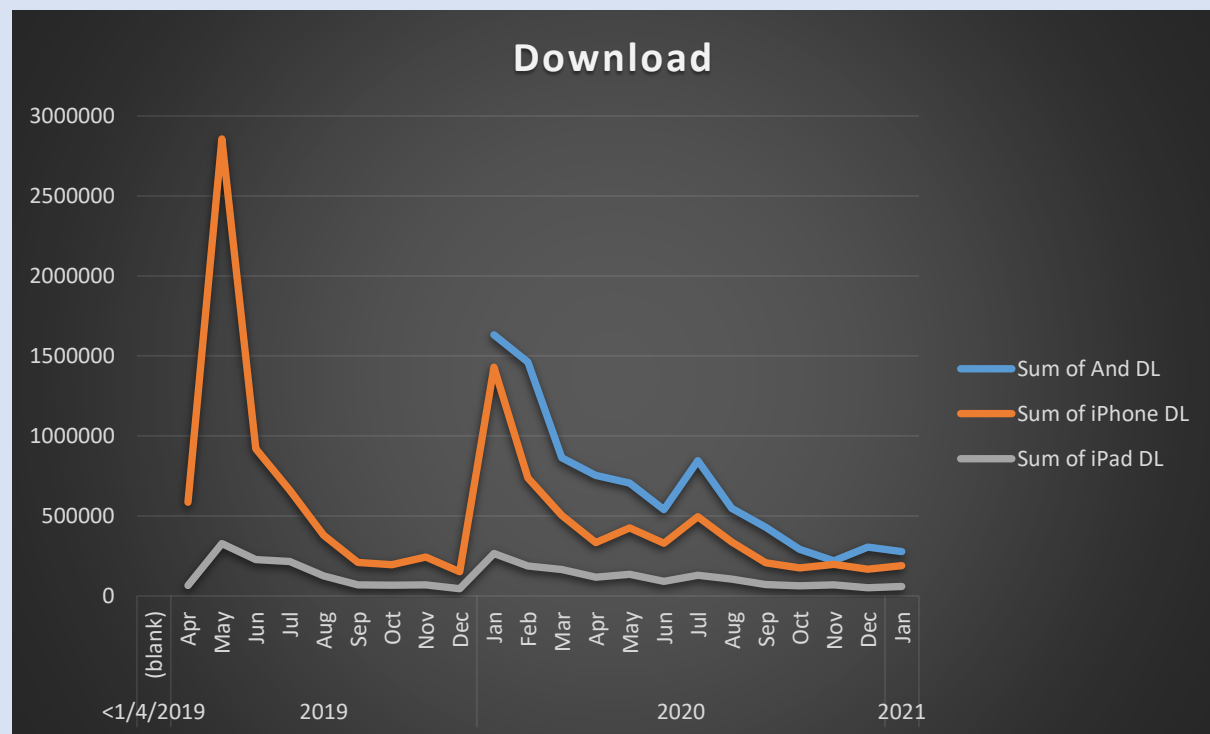

Strategy effectiveness in term of Game A

Company A

Comparing the correlation of download and revenue between different platform. The correlation is high among each dimension. So the trend of each platform tend to be same. Download and Revenue in overall have high correlation.

	And DL	And Rev	And ARD	iPad DL	iPad Rev	iPad ARD	iPhone DL	iPhone Rev	iPhone ARD	Total DL	Total Rev
And DL	1.00										
And Rev	0.78	1.00

For download, android platform has the highest overall download which make sense that android os has the highest market share with 71.81%. The second is iphone and at last ipad.

For revenue, android generate as much as iphone.

For Average Revenue Per Daily Active User or Unique User, ipad has the same rate as iphone and android come up last.

Game B

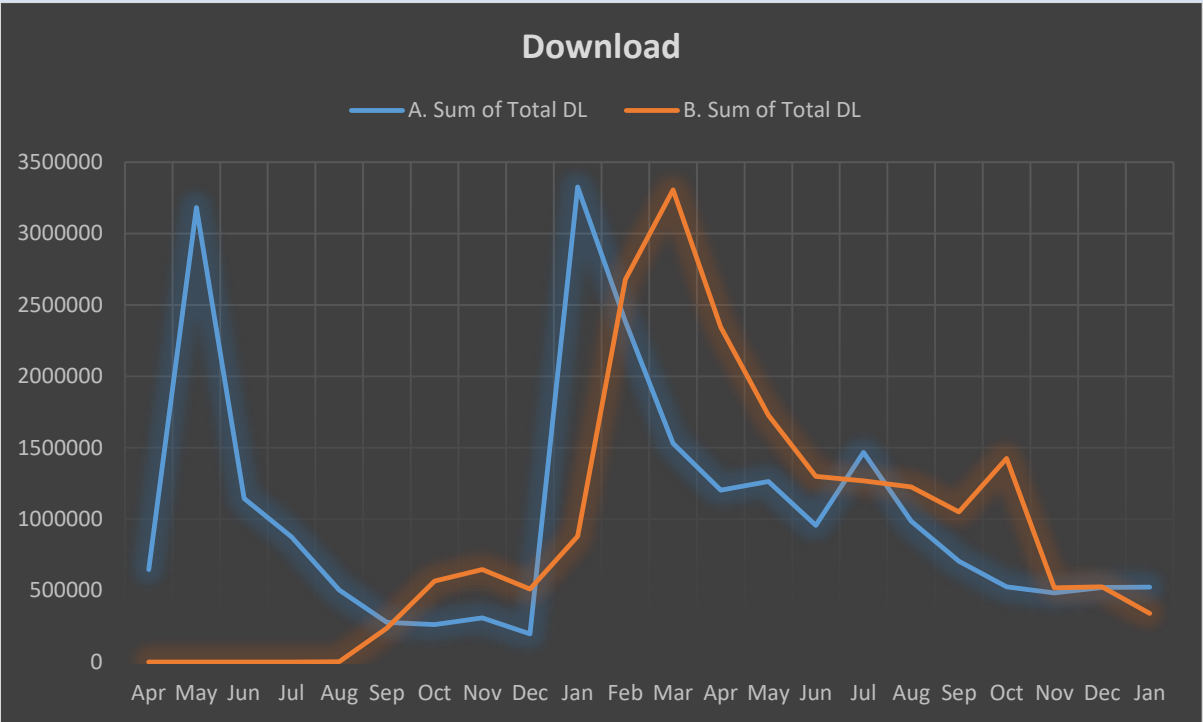

ARPDau

Comparing

For download, the overall market trend is same but company b performance better in the same timeline.

For revenue, company B revenue follow the download trend, company a revenue reaches a local maximum in certain time. Company A revenue is 4 times compared to B.

The ARPDau is obviously A higher than B.

Conclusion:

In term of company B, revenue tend to follow the trend of download, but company A generates a decent revenue regularly with 4 times the amount of company B and the revenue did not follow the download might because of different monetization method. Company B might mainly focus on Ad Revenue. For ARPDau company A also much higher than company B.
